

# 888344 Digital Interaction Project Lab

## Lab 2. Contextual Design: Flow Model

A flow model illustrates the sequence of steps a user takes to accomplish a task. It typically includes actions, decisions, and possible paths the user might follow.

### *Work in pairs*

Choose **one** of the following options and create a flow model:

1. **Website:** Consider the flow model for a news website. It would depict the steps users take from landing on the homepage, browsing different categories or headlines, selecting an article to read, and potentially sharing it on social media.
2. **Phone App:** For a recipe app, the flow model might illustrate the steps users follow to search for recipes, select one, view ingredients and instructions, and store or save as a favourite recipe for later use.
3. **Digital Tool:** In the context of a project management platform, the flow model could outline the steps users take to create a new project, assign tasks to team members, track progress, and generate reports.

You may decide to use your own idea for a website, phone app or digital product or continue from previous lab work

**Submit one document with the solution to the above.**

To submit your work either hand in a hard copy or send an email to Dr Séamus at [drseamuslyons@gmail.com](mailto:drseamuslyons@gmail.com). Include your names, student id numbers, exercise name: '344 Flow Model and attach the document.
